

*More Than Words: LIVE* is an interactive sound installation. The work takes as its starting point the MPC player, often used in music making. However, instead of mixing beats, the piece allows for **stream-of-consciousness storytelling** to take place on a collective and individual scale, between online and “real life” spaces.

The usual workshop model that is used to generate the content in other *More Than Words* installations, is instead played out in real time in *More Than Words: LIVE*. The MPC board is initially populated by an **algorithm using keyword dictionary searches**. Spectators can add sounds and words to the MPC board – adding their own associations. The resulting **constantly changing story content** is a product of the collective creative process.

This version of the installation takes as its inspiration our **fears and hopes regarding technology**, and what better way to explore those concepts than collectively, via Twitter, and using the very **machines and devices that simultaneously terrify and delight us**.

Each viewer that enters into the MPC board is able to choose which sounds will be activated and listened to, discovering the new additions from Twitter in real time. All activity taking place in the MPC board will be recorded and uploaded through **live-stream video via Periscope to Twitter**. Spectators, remote and in person, will be able to see the real-time reactions of the MPC board users to the sounds that are being added by the voyeuristic public. The work not only allows for **various ways of viewing, but also for various forms of participation and engagement** in the collective storytelling process.

---

## How to add a sound to the MPC board:

1. Log into Twitter on your phone or computer (for remote viewers).
2. Tweet to us @MTW\_LIVE in one of the following three ways
  - **Send us a link to a YouTube video.**  
Videos can include songs, news clips, or anything else that you associate with the live story and the other sounds on the MPC board. Limit videos to 4 minutes maximum.
  - **Send us a quote.**  
Texts sent in quotes will be read by an automated voice as they are written. Example: “Killer robots”
  - **Send us a regular text.**  
The content of your Tweet will be used to automatically search YouTube and an associated video will be selected based on the Tweet that you send.
3. The corresponding audio will be added to the MPC board.
